CD NAVIGATION EUROPE NAVTEQ LANCIA THESIS romania -. We will write a custom essay sample on the topic Cd Navigation Europe Navteq Lancia Thesis specifically for you for only \$13.90/page.Q: Mongoddb - How do I query first and last name? I'm trying to query the MongoDB for data that's in this format { "_id": "test", "firstname": "test", "lastname": "test", } Basically I need to retrieve the firstname and the lastname separated. I've tried this query : db.collection("test").find({}) but it only returns { "_id": "test", "firstname": "test", "lastname": "test" } How can I retrieve both firstname and lastname separated? A: You need to use the aggregation framework. db.collection.aggregate([{ "\$project": { "firstname": 1, "lastname": 1 } }]) A: You can use the \$project operator to "merge" the two fields into two fields. db.collection.aggregate([{ "\$project": { "firstname": "\$firstname", "lastname": "\$lastname" } }]) This will return an array of objects in the format [{ "_id": "test", "firstname": "test", "lastname": "test" }, { "_id": "test", "firstname": "test", "lastname": "test" }] Spanish Civil War casualty indexes: historical background and war casualties until 1940. During the Spanish Civil War (1936-1939), the international figure for Spanish war dead and missing was calculated according to various indexes. In the index for the first year of the war, the Spanish State figure is that calculated from the Government's reports of dead and missing of its Air Force, Merchant Navy, Military Security Service and Medical Corps. In 1935, the Republican government reported about 17,000 dead and missing (which may be considered as a minimum for the first year
