1. Smart Sharpen: Sharpen is one of the features that makes a digital photograph look more appealing and attractive. However, with every digital photograph comes the processing of edge detection. Well, the old method is to intensively sharpen the edge. And this method results in a photograph with "too much" sharpness - think of a snow-covered branch on a tree. Changing the sharpening settings to Process: Sharpen" and then increasing the Radius slider produces a softening effect. The same effect is obtained by using the Photoshop Brush tool. Since Sharpen works at extremely high values, you may need to go to Filter > Sharpen > Smart Sharpen for a more natural enhancement. However, this tool will not sharpen very dark areas. Smart Sharpen is on by default, but you can turn it off in the Adjustments panel.
2. Adjust Opacity: By default, Photoshop looks for the best noise-free and sharp images. Since sharpness and noise are mutually exclusive, you can tweak the individual controls of Opacity and Luminance to get the best noise-free and sharp image. Luminance simply adjusts the brightness of the pixels in the photo while the Opacity is all about altering the background color.
