The program offers the tools I wish all of the desktop applications I use contained in a single program. Yet, whereas most of those applications all look, feel, and operate the same way, every Photoshop user I know has a favorite look and feel. Photoshop is absolutely customizable, giving users control every step of the way. In the default appearance, you see the lowest common denominator of file types; a vast range of filenames, masking, and color spaces. It's a popularity contest: At first glance, Photoshop's raw power and sophistication leave little room for improvement. But if you've played with the shortcuts, you realize there's much more than Photoshop can accomplish. Everything, from its UI to its features, is simple, easy to learn, and easy to use. The speed in which you can create stunning images with a few simple tools is amazing. The program is robust enough to do virtually any type of image editing, from straightforward resizing (as seen on the top left corner of **BELOW**), to advanced illustration, to image retouching, and even creating.psd encoded print files. Photoshop is, in essence, a photographic manager, one that can save you a lot of time with complex operations and that makes it an essential piece of software in any serious photographer's workflow. As of CS6, the program can also recognize face shapes, perform retouching, and create vector files. My biggest gripe with Photoshop, however, is that an astounding amount of time is spent clicking and dragging, undoing and redoing, to get your ultimate effect. But, I found that the program's new speed—and its ability to work in the Cloud—doomed that charge for some of my most commonly used tasks.

What It Does: The Gradient tool creates smooth gradients. You can apply these gradients to any Layers in Photoshop. When selecting the Gradient tool, it will automatically choose a preset gradient, meaning you have to choose the color for the top-left hand corner and the color for the bottom-right hand corner. You can then shade only a specific area to create a gradient. Each side of the gradient layer then becomes one of the colors used to create it, and you can easily adjust the gradient by clicking the line and using the scroll bar to achieve the desired effect. It's a great way to achieve a gradient, no matter what the subject matter of your image is. As Pro users, our editing requirements were in Photoshop and we were quite heavy in Custom Presets and Layers so we could create workflow in PS for our diverse content and met those needs quite well. As a new Cinics user, we wanted to look for a program that had a great workflow in place and would fit our needs best without the learning curve of Photoshop. When we met with the team at Adobe, we knew that they had a true understanding of our design needs and how important a program being familiar with was for our team. So, we looked at a variety of other programs that could meet those needs and Adobe was a clear choice. After several discussions with staff at Adobe to see what we were looking for along with reviewing a few other content and design management tools, we came to the conclusion that there was no other program that could give us that level of power and flexibility that Adobe could. We had looked at the program and found other similar programs that really weren't well thought out and didn't help us push our creative

limits. We formed the ' Cinics GV Team ' within the Creative Cloud community of users and we were able to build a system to meet our needs without adding to the complexity of the editing process.
