The integration with Lightroom is another substantial change. You can import images directly from Lightroom and the other way around, and you can create or edit images directly in Lightroom. You can even retrieve images directly from Lightroom to Photoshop. This makes taking advantage of amazing features in Lightroom much easier. The original Lightroom 4.3 was not set up with the integration tools; if you would like to use Lightroom 4, this is still available in Lightroom 5. For those not ready to make the move, however, you can still explore the interface of both applications separately. I think one of the most useful aspects of the integration, especially with the Catalog browsing functionality, is the increased ease at which images can be sorted and organized. Prior to the integration, you would need to navigate the way Lightroom displays images and then select the correct “group” and after that, find the specific image you want to work on. That was incredibly slow. Like many of the changes, this one too is understated. If you have used Lightroom 4, you have surely seen the various changes with Albums and Collections. In the latest releases of Lightroom, you don’t have to select the Albums/Collections (you can still do that) you simply click on the folder you want attached, and it’s all there. I feel this is one of the more significant features of the program, as most people collect their images in several different Albums/Collections. Apart from the changes to the interface, the Collection importer and the move of the “Collections” folder into the tool itself, nothing else is significantly different.

What can I do with Photoshop on the web? Photoshop has dozens of features in Power Design, Layer, Masking, and it's many levels of editing functionality. I'm going to hold off on the list, because as I wrote before many of these features are turned off or disabled in Photoshop on the web. One feature I have been waiting to see in the web version are the non-destructive adjustments, since I can't do those (really) on the web. So I'll go with: Selection, Channels, Adjustment Layers, and Video. So is that enough? Maybe not?

The new app will also make it possible for users to connect directly with an access point to the cloud, or to a specific broadcast, to edit large files from anywhere into their creative environments. These capabilities enable making faster on-the-fly edits without having to leave Photoshop. "We are excited to share our real-time cloud-based features with the world for the first time at Adobe MAX, and further show our commitment to the Creative Cloud community," said Adele Wong, senior vice president of global product marketing at Adobe. "With the new features, users can include data, video or other objects in a presentation using a single click — and they can simply continue to edit that object any time. With the new Smart Object feature, adding layers to a Photoshop document allows for multiple edits to be made over an edited file with just a single click. Going beyond multiple layers, with the new Multi-Sited Save function, data from different sources can be combined with a single click. "With the evolution of broadcast technology, we're seeing a growing desire to work in new ways and across new platforms to more creatively collaborate," said Andrew Keys, vice president,

product management at Adobe. "We're excited to bring this kind of power into Photoshop — to empower creators to be at the center of their workflow, and for Photoshop to be the engine for their ideas." The offerings are the latest example of how Adobe is innovating at the intersection of creativity and technology. The company introduced Photoshop CC during MAX in 2014, and the apps for Windows, Mac, iOS, and Android have continued to evolve. Photoshop's robust feature set has helped it set the standard for digital imaging. Last November, Adobe announced that developers were using Adobe XD, a cross-platform design app connected to Photoshop, to create billions of objects and retain more than \$26 billion in advanced stock photography sales.
